

FULL-STACK JAVASCRIPT DEV

Amna Amri

I am a junior developer currently in training, acquiring the skills needed to become a Full-Stack JavaScript Developer at Interface3. I am highly curious and passionate about learning and discovering new things. I particularly appreciate the wealth of information and documentation available in the IT world. Some of my favourite areas so far have been building APIs, and working with Node.js, React, and Vanilla JS. I am also interested in other languages such as Python, SQL, and C#.
